Serial No.: 10/658,490

Filed: September 8, 2003

Docket No.: 59004US002

Title: VEHICLE TOUCH INPUT DEVICE AND METHODS OF MAKING SAME

---

**IN THE CLAIMS**

Please cancel claims 8 and 41.

Please add claim 42.

Please amend claims 1, 12, 23, and 28 as follows:

1. (Currently Amended) A touch input device for interacting with electronic systems in a vehicle that includes an airbag, comprising:

an airbag cover having an airbag surface accessible to and touchable by an occupant of the vehicle; and

a capacitive touch sensor disposed between the airbag and the airbag cover, the touch sensor configured so that a touch applied on to a designated area of the airbag surface of the airbag cover forms a circuit through the airbag surface to the touch sensor that allows capacitive coupling between the touch and the touch sensor through the airbag surface of the airbag cover, the touch sensor adapted for connecting to a controller that uses signals generated by the capacitive coupling to interact with multiple electronic systems ~~one of radio controls, a heads-up display, a heating/cooling blower, a navigation system, and a hands-free phone~~ of the vehicle;

wherein the capacitive touch sensor is configured to reduce interference with airbag deployment.

2. (Original) The touch input device of claim 1, wherein the vehicle is an automobile.

3. (Original) The touch input device of claim 1, wherein the surface of the airbag cover comprises a relief pattern marking the designated area.

Title: VEHICLE TOUCH INPUT DEVICE AND METHODS OF MAKING SAME

---

4. (Original) The touch input device of claim 1, wherein the airbag cover is on a steering wheel.

5. (Original) The touch input device of claim 4, wherein the steering wheel incorporates additional touch sensors.

6. (Original) The touch input device of claim 1, wherein the airbag cover is on a passenger side of the vehicle.

7. (Original) The touch input device of claim 1, further comprising one or more additional capacitive touch sensors positioned between the airbag and the airbag cover.

8. (Cancelled)

9. (Original) The touch input device of claim 1, wherein the capacitive touch sensor is an x-y sensor.

10. (Original) The touch input device of claim 1, wherein the capacitive touch sensor is a quadrant segmented sensor.

11. (Original) The touch input device of claim 1, wherein the capacitive touch sensor is a scroll bar sensor.

12. (Currently Amended) The touch input device of claim 5, further comprising at least one discrete capacitive touch sensor button disposed within a spoke of the steering wheel, the capacitive coupling calibrated to generate for the button one of a button down signal and a button up signal.

Title: VEHICLE TOUCH INPUT DEVICE AND METHODS OF MAKING SAME

---

13. (Original) The touch input device of claim 1, wherein the capacitive touch sensor comprises a substrate comprising paper.

14. (Original) The touch input device of claim 1, wherein the capacitive touch sensor comprises a substrate comprising cloth.

15. (Original) The touch input device of claim 1, wherein the capacitive touch sensor comprises a substrate comprising plastic.

16. (Original) The touch input device of claim 1, wherein the airbag cover provides a substrate for the capacitive touch sensor.

17. (Cancelled)

18. (Cancelled)

19. (Cancelled)

20. (Cancelled)

21. (Cancelled)

22. (Cancelled)

23. (Currently Amended) A method of making a touch-enabled airbag cover, comprising:  
providing an airbag cover configured for enclosing an airbag in a vehicle and for providing a finished surface;

---

disposing a capacitive touch sensor on a back surface of the airbag cover opposing the finished surface, the touch sensor configured so that a touch to a designated area of the finished surface allows capacitive coupling between the touch and the touch sensor through the airbag cover;

connecting the touch sensor to a controller; and

using signals generated by the capacitive coupling to interact with one of radio controls, a heads up display, a heating/cooling blower, a navigation system, and a hands-free phone of the vehicle; and

configuring the capacitive touch sensor to minimally interfere with airbag deployment.

24. (Original) The method of claim 23, wherein the step of disposing a capacitive touch sensor on the back surface of the airbag cover comprises transferring conductors forming the touch sensor from a decal layer to the back surface of the airbag cover.

25. (Original) The method of claim 23, wherein the step of disposing a capacitive touch sensor on the back surface of the airbag cover comprises laminating the touch sensor to the back surface of the airbag cover.

26. (Previously Presented) The method of claim 23, wherein the step of disposing a capacitive touch sensor on the back surface of the airbag cover comprises disposing the touch sensor in a mold and molding the airbag cover using the mold so that the touch sensor is embedded in the back surface of the airbag cover.

27. (Original) The method of claim 23, further comprising marking the designated area with a relief pattern that can be discerned by a user's tactile senses.

28. (Currently Amended) A touch input device for interacting with electronic systems in a vehicle, comprising:

Title: VEHICLE TOUCH INPUT DEVICE AND METHODS OF MAKING SAME

---

a capacitive touch sensor disposed behind a surface in the vehicle that is accessible and touchable by an occupant in the vehicle, the touch sensor disposed in a manner such that the presence of the touch sensor maintains the look, feel, and functionality of the surface as if the touch sensor was excluded,

wherein the touch sensor is configured so that a touch to a designated area of the surface allows capacitive coupling between the touch and the touch sensor through the surface, the touch sensor being adapted for connecting to a controller capable of using signals generated by the capacitive coupling to interact with ~~one of radio controls, a heads up display, a heating/cooling blower, a navigation system, and a hands free phone~~multiple electronic systems of the vehicle;

wherein the capacitive touch sensor is integrated with the surface in the vehicle and configured to enable unimpeded safety functionality of the surface in the vehicle.

29. (Original) The touch input device of claim 28, wherein the surface is a surface of a steering wheel.

30. (Original) The touch input device of claim 28, wherein the surface is a surface of a dashboard.

31. (Original) The touch input device of claim 28, wherein the surface is a surface of a visor.

32. (Original) The touch input device of claim 28, wherein the surface is a surface of a center console.

33. (Original) The touch input device of claim 28, wherein the surface is a surface of an arm rest.

34. (Original) The touch input device of claim 28, wherein the surface is a surface of

---

a seat cover.

35. (Original) The touch input device of claim 28, wherein the designated area of surface is marked by a relief pattern discernable by a user's tactile sense.

36. (Previously Presented) The touch input device of claim 1, wherein the capacitive touch sensor is an off-display capacitive touch sensor characterized by an absence of a display screen.

37. (Previously Presented) The touch input device of claim 28, wherein the surface is not a display screen.

38. (Previously Presented) The touch input device of claim 28, wherein the capacitive touch sensor comprises a projected capacitive touch sensor and the surface comprises an opaque surface.

39. (Previously Presented) The touch input device of claim 11, wherein the scroll bar touch sensor comprises an analog slider scroll bar touch sensor.

40. (Previously Presented) The touch input device of claim 11, wherein the scroll bar touch sensor comprises a set of discrete sensor pads.

41. (Cancelled)

42. (New) The touch input device of claim 1, wherein the capacitive touch sensor is embedded in the airbag cover.
